## PREFACE.

This book is intended to fill a long-felt want. The Department of Statistics formerly published the figures for area and outturn of crops in its annual administration report. Since 1342 F. such statistics have been incorporated in the "Agricultural, Industrial and Trade Statistics." These, however, are in abstract forms prescribed by the Government of India, for one year only at a time. Consequently comparison with the previous years is not easily had. Both for this Department and for others, such as the Agriculture, Railway, Commerce and Marketing, agricultural statistics in details for a number of years are in constant demand. Whenever such a need arose much time and labour was expended by this office. To minimise such difficulties and to make available a ready reference book to all interested in the importance of statistics of agricultural production in regard to food and raw materials, this has been compiled and will be revised quinquennially. It shows in detail the classifications of areas of the Dominions, and sets forth the acreage under each crop, and its quantitative yield. Sources of irrigation, areas irrigated, and the crops irrigated are also stated. Land revenue assessment, livestock, together with relevant charts and diagrams are also incorporated.
